Installation Instructions

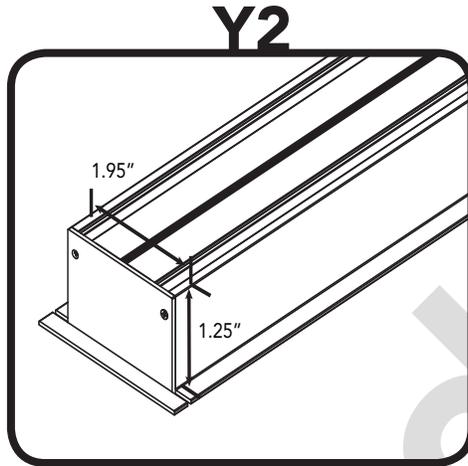

LEDBARIII&IVY
Low-Voltage 12-24VDC Recessed Light Fixture

Direct Screw Installation

Recommended Installation Method!

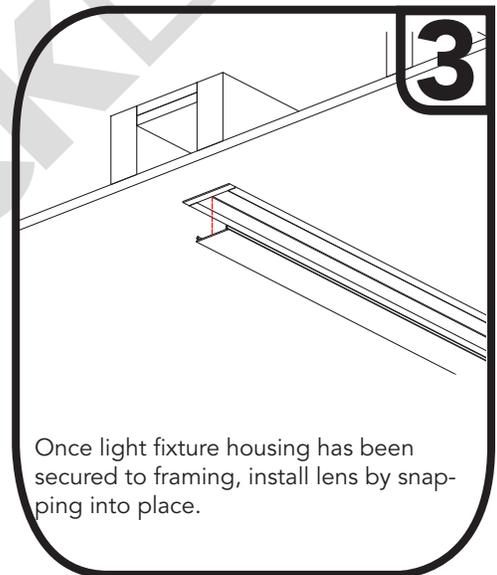

Framing Required! Build framing on sides and top of light fixture for support.
Create Opening: Refer to chart on **Page 1** for required opening size.
Framing NOT required for solid/concrete ceilings!

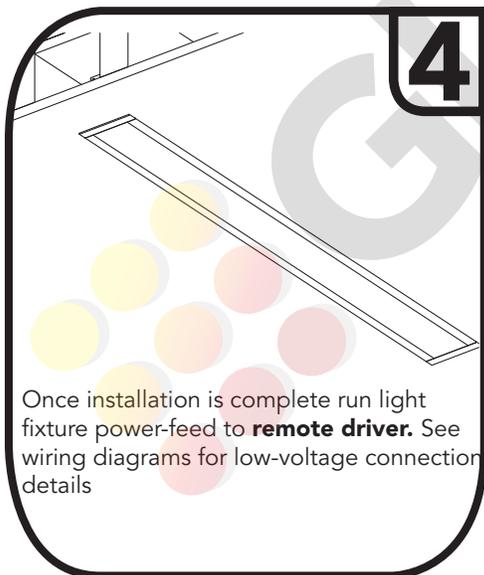

1
Pass mounting screws through light fixture housing using pre-drilled mounting holes on rear of housing.

2
Secure light fixture housing to framing using screws suitable to your installation type. **#6 Screw Recommended**

3
Once light fixture housing has been secured to framing, install lens by snapping into place.

4
Once installation is complete run light fixture power-feed to **remote driver**. See wiring diagrams for low-voltage connection details

LEDBARIII&IVY
Low-Voltage 12-24VDC Recessed Light Fixture

Twist-Clip Installation

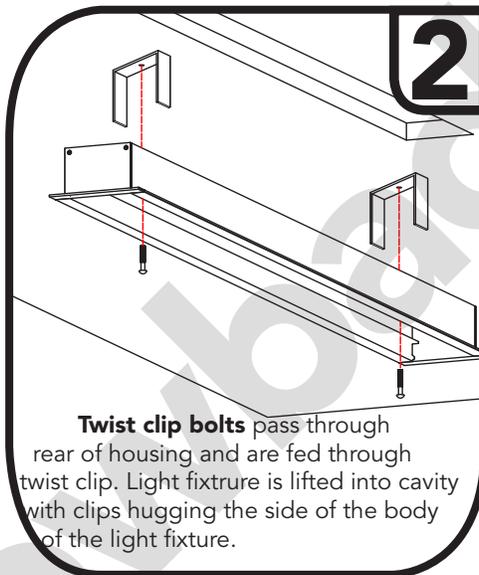

Twist Clip Mounting: Specialized clip secures light fixture to drywall.

Create Opening: Refer to chart on **Page 1** for required opening size.

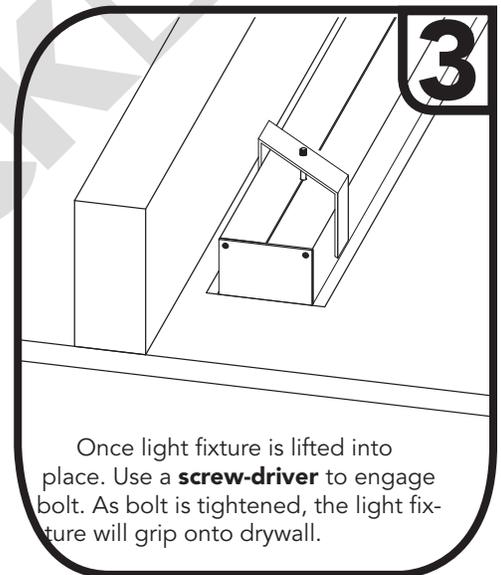

1

Pass **twist clip bolts** through pre-drilled holes on rear of rear of light fixture housing.

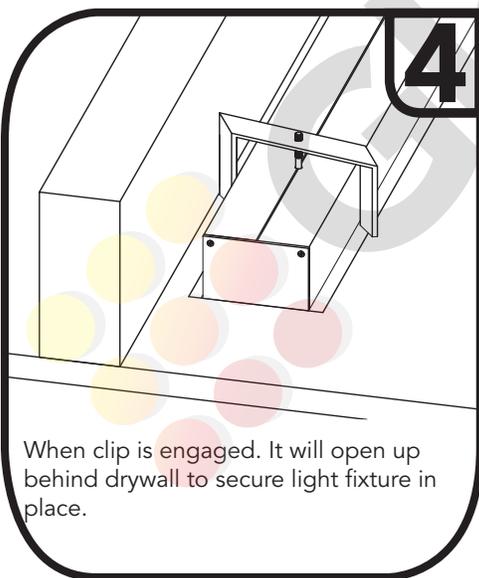

2

Twist clip bolts pass through rear of housing and are fed through twist clip. Light fixture is lifted into cavity with clips hugging the side of the body of the light fixture.

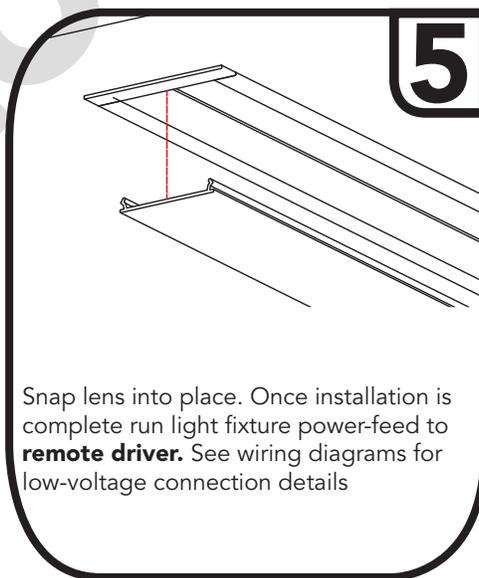

3

Once light fixture is lifted into place. Use a **screw-driver** to engage bolt. As bolt is tightened, the light fixture will grip onto drywall.

4

When clip is engaged. It will open up behind drywall to secure light fixture in place.

5

Snap lens into place. Once installation is complete run light fixture power-feed to **remote driver**. See wiring diagrams for low-voltage connection details
